BikeRadar verdict

45 out of 5 stars

"Pricy – but simple, stable and very quiet"

- [Bikeradar Review](#)

By Cycling Plus

The Jetfluid Pro is the latest fluid resistance trainer from CycleOps. It works by having a fluid filled chamber with an 'impeller' that rotates through the liquid like a boat's propeller. As it turns this pushes the fluid towards the outer edge, creating resistance.

Keeping the temperature of the unit down is essential for maintaining a progressive resistance and CycleOps does this with its patented airflow channels.

It's a pleasingly straightforward machine to use. No external adjustment is necessary and you can be riding this within minutes. The resistance infinitely adjusts with your power and is impressively progressive and even.

Included with CycleOps' Pro series trainers is a workout DVD for both experienced riders and novices, providing a tough but intuitive workout.

The best feature, though, is the noise – it's the quietest trainer we've used. It isn't cheap but this stable, simple and quiet winter training aid is highly recommended.

Manufacturers description

If you're a real roadie, you shave your legs. What's more, you measure what you eat, you obsess about your training regimen, you read everything you can about cycling, you were born to win. In other words, you're a JetFluid Pro rider. The JetFluid Pro's PowerTuned technology provides smooth, realistic accelerations and inertia offering real-world feel for widest range of riders and riding types. Its cooler operating temperature delivers long-lasting performance and a stable progressive power curve with consistent resistance throughout the entire ride regardless of ride type. * PowerTuned technology provides smooth, realistic accelerations and inertia offering real-world feel for widest range of riders and riding types. * Cooler operating temperature delivers long-lasting performance and stable progressive power curve. * Smooth, quiet and realistic resistance. * Consistent resistance throughout the entire ride regardless of ride type. * Pro series frame offers quick installation and removal of bike with ability to lock resistance unit in place for transport and storage. * Pro series frame levels easily for riding on all surfaces. * Single-sided mount of Pro Series frame permits quick bike install and removal.
